

## CATHETER TIP

## ABSTRACT OF THE DISCLOSURE

5                   A catheter tip may be coupled to a catheter shaft. The catheter tip may include markers, such as radiopaque markers and MRI markers, securement hubs, recessed portions, a radiused tip, and varying axial flexibility. The catheter tip may be a molded tip, and the markers may be insert molded. Recessed portions and raised  
10                   securement hubs may be formed during the molding process. The raised hubs may be integrally formed and made from the same material as the catheter tip.
